

Godsil-Gutman: the average characteristic polynomial of a random ± 1 signing is the matching polynomial

$+++: x^3 - 3x - 2$ $++ -: x^3 - 3x + 2$ $-+-: x^3 - 3x - 2$

$2^{-|E|} \sum_{\text{signings}}$

(all 2^3)

$\mu_{K_3}(x) = x^3 - 3x$
the matching polynomial

godsil_gutman (Lean 4 - axioms: propext, choice, Quot.sound)
